Portfolio

Personal Profile

- Software Developer with +4 years of experience specializing in high-performance web applications using React, Next.js, and TypeScript.
- Proven expertise in architecting scalable front-end systems with a strong focus on Clean Code, SOLID principles, and component-driven design.
- Hands-on experience leading development cycles, defining MVPs, and managing technical requirements for SaaS products.
- Skilled in Full-stack development, leveraging Node.js (Express), Prisma, and C# to build robust backend integrations and efficient data models.
- Extensive experience with collaborative workflows using Git and Bitbucket, including strict PR management, code reviews, and mentoring junior developers.
- Deeply committed to engineering excellence, ensuring software quality through automated testing (Cypress) and web accessibility (WCAG).
- Cross-stack experience with Java/Spring Boot and Angular, maintaining and integrating enterprise systems alongside modern React/Node.js applications.

Professional Experience

- **2026 – Current – Yox Mobile**

Position: Full-stack Software Developer
Worked on the development and evolution of a white-label SaaS platform for the telecommunications sector, focusing on product scalability, dynamic customization for multiple clients, and robust integrations.
Key activities:

- Led front-end development using React Hooks to manage complex state and side effects, ensuring high-performance interfaces with Tailwind CSS and Shadcn/ui.
- Engineered back-end solutions with Prisma ORM and Node.js, managing database migrations and ensuring data integrity through advanced debugging and logging.
- Established a rigorous development workflow using Jira for agile project management (Sprint planning/Issue tracking) and Bitbucket for PR management and Clean Code enforcement.
- Defined project roadmaps and MVPs, utilizing React Testing Library to verify component behavior and ensure a robust codebase before production releases.
- Designed and implemented full-stack architectures using Next.js, TypeScript, and Node.js (Express.js), ensuring rapid response times and high availability for telecom operations.

- **2024 – 2026 – Defensoria Pública do Estado de Goiás**

Position: Software Developer
Development of government-level web applications focused on legal assistance services, ensuring high availability and accessibility for the public sector.
Main activities:

- Architected and developed complex user interfaces using Next.js, React, and TypeScript, leveraging React Hooks to manage state and side effects efficiently.
- Engineered a robust, scalable library of reusable UI components based on Design Systems and Atomic Design principles.
- Applied advanced debugging skills using Browser Developer Tools to diagnose and resolve complex client-side bottlenecks and performance issues.
- Implemented a comprehensive quality assurance pipeline by scripting automated E2E tests with Cypress to ensure code integrity.
- Developed accessible and semantic HTML/CSS structures following WCAG standards to ensure inclusivity.
- Managed source code and collaborated in a team environment using Git for version control and peer code reviews.

- **2023 – 2024 – Senior Sistemas**

Position: Software Developer
Focused on the UAU ERP financial modules, handling critical data and backend integrations for large-scale enterprise systems.
Main activities:

- Migrated and refactored front-end data flows using Next.js, leveraging rendering strategies (SSR/SSG) to improve financial dashboard loading times.
- Built high-performance interfaces consuming complex REST APIs, ensuring efficient handling of large-scale JSON data structures.
- Developed performance automations with Puppeteer, simulating real user interactions in TypeScript environments to identify and fix loading bottlenecks.
- Collaborated on defining scalable system architectures, ensuring efficient communication between the .NET ecosystem and the modern front-end stack.

- **2022 – 2023 – Vega Incorporadora**

Position: Developer Intern
Highly focused on front-end development and data management, contributing to the creation of scalable interfaces and efficient database structures.
Main activities:

- Developed SPAs (Single Page Applications) with React, applying Clean Code principles and Componentization to create modular and reusable codebases.
- Built features using Next.js and TypeScript, ensuring type safety from data structures through to the UI layer.
- Managed application state and integrated components with both relational (MySQL) and non-relational (MongoDB) databases.
- Maintained backend services and handled system support tasks, ensuring code consistency through Git version control.

Education

- Systems Analysis and Development - University Center (UniFANAP). 2024.

Qualifications and Complementary Activities

- Core: TypeScript, React (Hooks, Context API), Next.js (App Router), Node.js (Express)
- Back end & data: REST APIs, Swagger/OpenAPI, Auth.js (NextAuth), JWT, PostgreSQL, Prisma, MongoDB · also C#/.NET and Java/Spring Boot
- Front end: Zustand, Redux, React Hook Form, Zod, Tailwind CSS, shadcn/ui, Angular, Figma, accessibility (WCAG)
- Testing: Cypress, Playwright, React Testing Library, Puppeteer
- DevOps: Docker, DigitalOcean, Vercel, Git (GitHub, Bitbucket), Jira (Scrum), CI/CD with Bitbucket Pipelines and GitHub Actions
- Practices: Clean Code, SOLID, white-label and component-driven design, debugging (Browser DevTools, Node.js)
- Languages: Portuguese (native), English (professional working proficiency, C1)
